Dear Mr. Benson

## **REF: FUEL STICK, FUEL CONDITIONER PERFORMANCE REPORT**

We wish to confirm the following after a controlled test on our 350KVA Generator Set.

We filled our 400Ltr fuel tank up and ran the 350KVA Generator Set at  $\frac{1}{4}$  load for 1hr to confirm the base line consumption, which worked out to be 30Ltrs Per Hr. We then refilled our fuel tank introduced Fuel Stick and ran the 350KVA Generator Set at  $\frac{1}{4}$  load for 3hr and the consumption was 70Ltrs.

The above test results confirmed the introduction of Fuel stick to our Generator Set reduced our consumption by 22% over the duration of the test and by 6.67Ltrs Per Hr. With the rising cost of fuel in Tanzania as well as the extended periods of power cuts we will be looking to implement the use of Fuel Stick at all our other properties.

We thank you for introducing us to Fuel Stick and would be happy to recommend the product.

Yours sincerely

Fayyaz Bhanji
